SUGGESTED ANSWERS/HINTS

1.
 - (a) **False** - Accrual concept implies accounting on 'due' or 'accrual' basis. Accrual basis of accounting involves recognition of revenues and costs as and when they accrue irrespective of actual receipts or payments.
 - (b) **False** - The Sales book is a register specially kept to record credit sales of goods dealt in by the firm, cash sales are entered in the cash book and not in the sales book.
 - (c) **False** - Bank reconciliation statement is prepared to reconcile and explain the causes of differences between bank balance as per cash book and the same as per bank statement as on a particular date.
 - (d) **False** - Finished goods are normally valued at cost or net realizable value whichever is lower.
 - (e) **True** - In the early periods of useful life of a fixed assets, repairs and maintenance expenses are relatively low because the asset is new. Whereas in later periods, as the asset become old, repairs and maintenance expenses increase continuously. Under written down value method, depreciation charged is high in the initial period and reduces continuously in the later periods. Thus, depreciation and repair and maintenance expenses become more or less uniform throughout the useful life of the asset.
 - (f) **True** - Discount at the time of retirement of a bill is a gain for the drawee and loss for the drawer.
 - (g) **False** - Cash withdrawal by the proprietor from his business should be treated as his drawings and not a business expense chargeable to profit and loss account. Such drawings should be deducted from the proprietors capital.
 - (h) **False** - According to Partnership Act, in the absence of any agreement to the contrary profits and losses are to be shared equally among partners.
 - (i) **False** - Receipts and payments account is a classified summary of cash receipts and payments over a certain period together with cash and bank balances at the beginning and close of the period.
2. **Cash and mercantile system:** Cash system of accounting is a system by which a transaction is recognized only if cash is received or paid. In cash system of accounting, entries are made only when cash is received or paid, no entry being made when a payment or receipt is merely due. Cash system is normally followed by professionals, educational institutions or non-profit making organizations.

On the other hand, mercantile system of accounting is a system of classifying and summarizing transactions into assets, liabilities, equity (owner's fund), costs, revenues and recording thereof. A transaction is recognized when either a liability is created/ impaired and an asset is created /impaired. A record is made on the basis of amounts having become due for payment or receipt irrespective of the fact whether payment is made or received actually.

Mercantile system of accounting is generally accepted accounting system by business entities

Working Notes:**1. Calculation of total commission:**

Let total commission be x

$$x = 900 \times ₹ 25 + \frac{1}{4} [(\text{₹ } 96,000 + \text{₹ } 51,000) - x - (900 \times ₹ 125)]$$

$$x = ₹ 22,500 + \frac{1}{4} [\text{₹ } 1,47,000 - x - ₹ 1,12,500]$$

$$x = ₹ 22,500 + \frac{1}{4} [\text{₹ } 34,500 - x]$$

$$4x + x = ₹ 90,000 + ₹ 34,500$$

$$5x = ₹ 1,24,500$$

$$x = ₹ 24,900$$

Total Capitalised Value of the firm

$$= \frac{\text{Average Profit} \times 100}{\text{Normal Rate of Return}} = \frac{₹ 1,50,000 \times 100}{20} = ₹ 7,50,000$$

Goodwill = Total Capitalised Value of Business – Capital Employed

$$= ₹ 7,50,000 - ₹ 5,00,000 \text{ [i.e., ₹ 3,00,000 (J) + ₹ 2,00,000 (K)]}$$

$$\text{Goodwill} = ₹ 2,50,000$$

(ii) **Super Profit Method:**

$$\text{Normal Profit} = \text{Capital Employed} \times 20/100 = ₹ 1,00,000$$

$$\text{Average Profit} = ₹ 1,50,000$$

$$\text{Super Profit} = \text{Average profit} - \text{Normal Profit}$$

$$= ₹ 1,50,000 - ₹ 1,00,000 = ₹ 50,000$$

$$\text{Goodwill} = \text{Super Profit} \times \text{Number of years' purchase}$$

$$= ₹ 50,000 \times 2 = ₹ 1,00,000$$

18. (i) **Fundamental Accounting Assumptions:** Fundamental accounting assumptions underlie the preparation and presentation of financial statements. They are usually not specifically stated because their acceptance and use are assumed. Disclosure is necessary if they are not followed. The Institute of Chartered Accountants of India issued Accounting Standard (AS) 1 on 'Disclosure of Accounting Policies' according to which the following have been generally accepted as fundamental accounting assumptions:

1. *Going concern:* The enterprise is normally viewed as a going concern, i.e. as continuing operations for the foreseeable future. It is assumed that the enterprise has neither the intention nor the necessity of liquidation or of curtailing materially the scale of the operations.
2. *Consistency:* It is assumed that accounting policies are consistent from one period to another.
3. *Accrual:* Guidance Note on 'Terms used in Financial Statements' defines accrual basis of accounting as "the method of recording transactions by which revenue, costs, assets and liabilities are reflected in the accounts in the period in which they accrue." The accrual 'basis of accounting' includes considerations relating to deferrals, allocations, depreciation and amortisation. Financial statements prepared on the accrual basis inform users not only of past events involving the payment and receipt of cash but also of obligations to pay cash in future and of resources that represent cash to be received in the future. Hence, they provide the type of information about past transactions and other events that is most useful to users in making economic decisions. Accrual basis is also referred to as mercantile basis of accounting.

(ii) **Objectives of preparing Trial Balance**

The preparation of trial balance has the following objectives:

1. *Checking of the arithmetical accuracy of the accounting entries:* Trial Balance enables one to establish whether the posting and other accounting processes have been carried out without committing arithmetical errors. In other words, the trial balance helps to establish the arithmetical accuracy of the books.
2. *Basis for preparation of financial statements:* Trial Balance forms the basis for preparing financial statements such as the Income Statement and the Balance Sheet. The Trial Balance represents all transactions relating to different accounts in a summarized form for a particular period. In case, the Trial Balance is not prepared, it will be almost impossible to prepare the financial

statements to know the profit or loss made by the business during a particular period or its financial position on a particular date.

3. *Summarized ledger:* Trial Balance contains the ledger balances on a particular date. Thus, the entire ledger is summarized in the form of a Trial Balance. The position of a particular account can be judged simply by looking at the Trial Balance. The ledger may be seen only when details regarding the accounts are required.
- (iii) Accounting conventions emerge out of accounting practices, commonly known as accounting principles, adopted by various organizations over a period of time. These conventions are derived by usage and practice. The accountancy bodies of the world may change any of the convention to improve the quality of accounting information. Accounting conventions need not have universal application.
- (iv) **Machine Hour Rate method of calculating depreciation:** Where it is practicable to keep a record of the actual running hours of each machine, depreciation may be calculated on the basis of hours that the concerned machinery worked. Under machine hour rate method of calculating depreciation, the life of a machine is not estimated in years but in hours. Thus depreciation is calculated after estimating the total number of hours that machine would work during its whole life; however, it may have to be varied from time to time, on a consideration of the changes in the economic and technological conditions which might take place, to ensure that the amount provided for depreciation corresponds to that considered appropriate in the changed circumstances. Proper records are maintained for running hours of the machine and depreciation is computed accordingly. For example, the cost of a machine is ₹10,00,000 and life of the machine is estimated at 50,000 hours. The hourly depreciation will be calculated as follows:

$$\begin{aligned}\text{Hourly Depreciation} &= \frac{\text{Total cost of Machine}}{\text{Estimated life of Machine}} \\ &= \frac{\text{₹10,00,000}}{50,000 \text{ hours}} \\ &= \text{₹ 20 per hour}\end{aligned}$$

If the machine runs for say, 2,000 hours in a particular period, depreciation for the period will be 2,000 hours × ₹ 20 = ₹ 40,000.
